# Opening up Education

From Alex Grech - Blockchain, Self-Sovereign Identity and Credentials, March, 2021 – <https://www.slideshare.net/alexgrech/blockchain-selfsovereign-identity-and-credentials>

# Priorities in Education

- United Nations Sustainable Development 2030 (SDG 4): ensuring inclusive and equitable quality education and promoting lifelong learning opportunities for all
- EU Digital Education Action Plan (2021-2027): envisions a high-quality, inclusive, and accessible digital education in Europe
- European Year of Skills 2023: aims to advance lifelong learning and skills shortages, supporting innovation and competitiveness

## Why a European Year of Skills?

Having a workforce with the skills that are in demand contributes to sustainable growth, leads to more innovation and improves companies' competitiveness. Skilled workers enjoy better job opportunities as well as broader possibilities to fully engage in society. This is key to ensure that the economic recovery as well as the green and digital transitions are socially fair and just.

The European Year of Skills 2023 puts skills centre-stage. Helping people get the right skills for quality jobs and helping companies, in particular small and medium enterprises, address skills shortages in the EU is what this Year is all about.

How? By showcasing skills development opportunities and activities across Europe, by fostering easier [recognition of qualifications](#) across borders, by bringing organisations and people together to share their experiences and insights, and setting out how EU initiatives and funding possibilities can help.

<https://unstats.un.org/sdgs/report/2022>

<https://education.ec.europa.eu/focus-topics/digital-education/action-plan>

<https://year-of-skills.europa.eu/>

## What are Digital Credentials

Europass Digital Credentials describe a learning achievement. They can describe activities, assessments, and professional entitlements as well as qualifications.

The [European Commission](#) is developing the Europass Digital Credentials Infrastructure (EDCI) to support efficiency and security in how credentials such as qualifications and other learning achievements can be recognised across Europe.

Work is ongoing on the development of the Europass Digital Credentials Infrastructure (EDCI). The EDCI will support authentication services for any digital documents or representations of information on skills and qualifications as outlined in [Article 4 \(6\) of the Europass Decision](#).

A credential is a documented statement containing claims about a person issued by an educational organisation following a learning experience.

Europass Digital Credentials describe a learning achievement. They can describe:

- activities (e.g. classes attended),
- assessments (e.g. projects),
- achievements (e.g. skills developed),
- professional entitlements (e.g. registration as a medical doctor) and
- qualifications.

*European Digital Credentials for Learning* respond to the need of the citizens to easily share their diplomas, transcripts of records, and other certificates of learning achievements in formal, informal, and non-formal settings, in a secure and digital way, when applying for a job or for further studies and training in any Member State

# Micro-credentials

## A European approach to micro-credentials

Micro-credentials offer more flexible and modular learning opportunities. Having a European approach will help widen learning opportunities and strengthen the role of higher education and vocational education and training institutions in lifelong learning.

Certifying the learning outcomes of short-term learning experiences, the micro-credentials could offer a flexible and targeted way to help people acquire new knowledge, upskill and reskill the competences needed for their personal and professional development.

### What are micro-credentials?

A micro-credential is a proof of the learning outcomes that a learner has acquired following a short, transparently-assessed learning experience. They are awarded upon the completion of short stand-alone courses (or modules) done on-site or online (or in a blended format).

### Flexible learning

Micro-credentials open education up to more people because of their flexible, short-term nature. They are open to all types of learners. They can be particularly helpful for people who

- are looking to build on their current knowledge rather than get a full degree
- want to bridge a gap between degrees or their initial formal education and emerging labour market skills
- want to upskill or reskill

Dec 14, 2020 - A European approach to micro-credentials

June 2022 - Council of the European Union: Recommendation on a European approach to micro-credentials for lifelong learning and employability

# Verifiable Credentials and EBSI

- Therefore there is a need to redesign the way educational credentials are issued, stored, displayed, and verified, bringing new opportunities for flexible and open participation in traditional education and in lifelong learning for upskilling and reskilling
- A Verifiable Credential (VC) is a tamper-evident and privacy-respecting credential, with specific Metadata and Proofs, requested by the Holder and issued by a competent authority, called Trusted Issuer, and where the authorship can be cryptographically verified (W3C, DCC, 2020)
- Blockchain technology, with its characteristics of security, transparency, and integrity – is a solution for a trusted, robust, scalable, and flexible decentralized credentialing ecosystem
- Through its Diploma use case, the European Blockchain Services Infrastructure (EBSI) represents a cross-border decentralized credentialing ecosystem for issuing Verifiable Credentials.

## What is EBSI ?

EBSI is user centric, decentralised and reusable in multiple contexts and use cases. It is based on open standards to stimulate interoperability and the creation of cross-border public services

# Trusted diplomas have great potential.

Students' mobility in Europe is a **broad market**. EBSI and EuroPass are its enablers.

**17 million**  
students (Bachelor, Master and PhD).

**2,465**  
higher education institutions

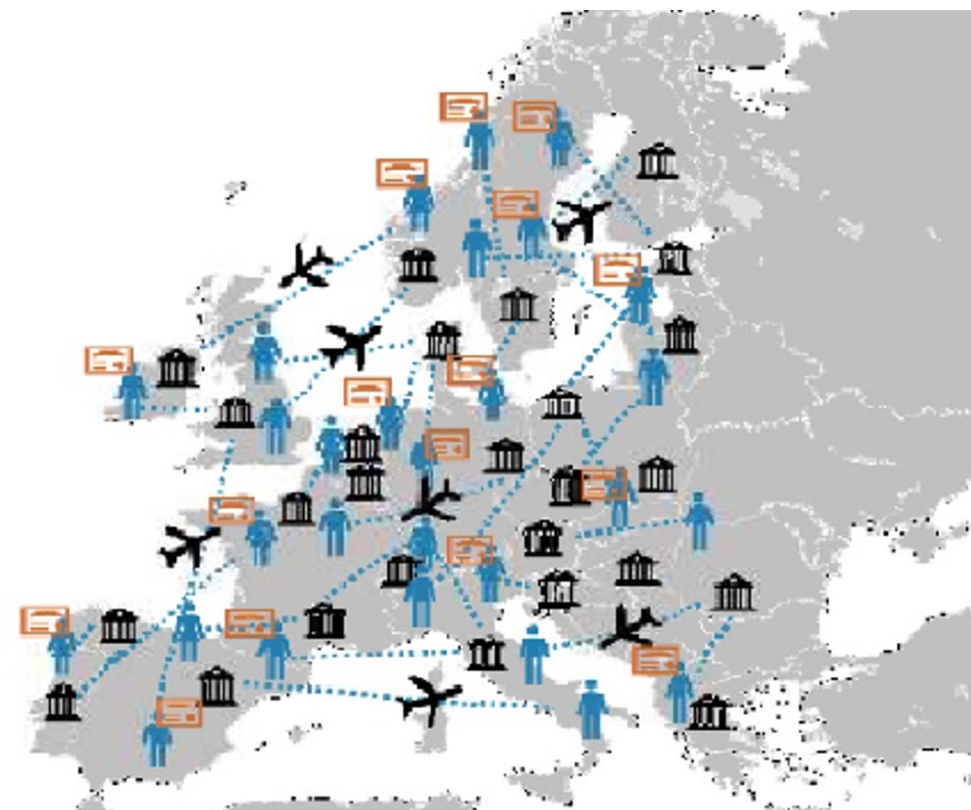

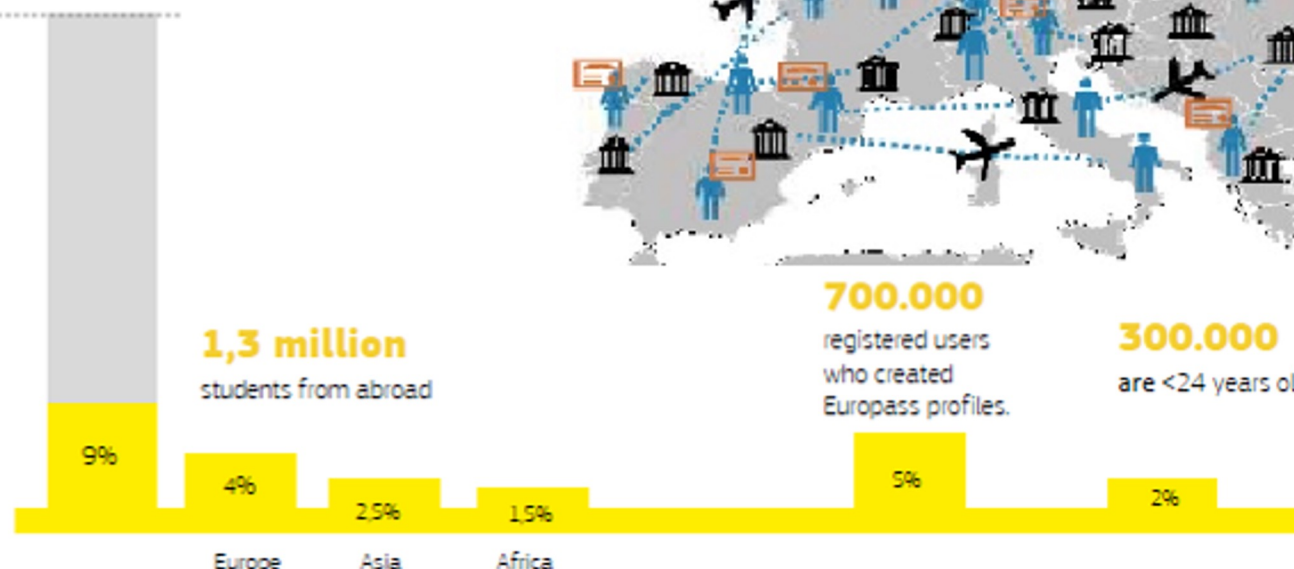

**27**  
European countries

**1.35 million**  
teachers

**4.0 million**  
students graduated (diplomas)

# Objectives and Outcomes of the project

01

**Setup and operation of an EBSI node**

Node operational from July 2021

02

**Credentialing System for issuing Verifiable Credentials on EBSI for university diplomas and micro-credentials**

Integrated with the National Student Enrolment Registry (Registrul Matricol Unic RMU) operated by UEFISCDI, and with Virtual Campus UPT & Unicampus

03

**5 miniMOOCs on Unicampus.ro**

04

**Communication and Blockchain community strengthening in Romania, with the aim to raise awareness of Blockchain / EBSI**

## Latest News

### România este una din primele 12 țări din UE care emit diplome pe European Blockchain Services Infrastructure (EBSI)

BY: CARMEN HOLOTESCU / ON: AUGUST 11, 2022

Membrii echipei EBSI4RO: Connecting Romania through Blockchain suntem mândri de realizările din primele 14 luni de implementare, care includ și demonstrarea cu succes a emiterii de diplome universitare pe European Blockchain Services Infrastructure (EBSI), în cadrul evenimentului EBSI Demo Day, din 31 mai. Alături de colegi din Grecia și Franța am colaborat îndeaproape în cadrul EBSI Early Adopters Programme, lansat în 15 iulie 2021, sub coordonarea profesionalei echipe EBSI și

## **TAO** Trusted Accreditation Organisation The ministry

Reduce friction in interactions, increase trust (transparency) and security in shared data.

**Build a new trust paradigm**

## **Issuer** The university A

Position your university as a pioneer brand, reduce friction in interactions, increase trust (transparency) and security in shared data. At scale, decrease administrative costs.

**Lead the change**

## **Holder** The student

Take control of their own data in a secure way and easily move with their own credentials across Europe.

**Enjoy mobility across borders**

## **Verifier** The company / university B

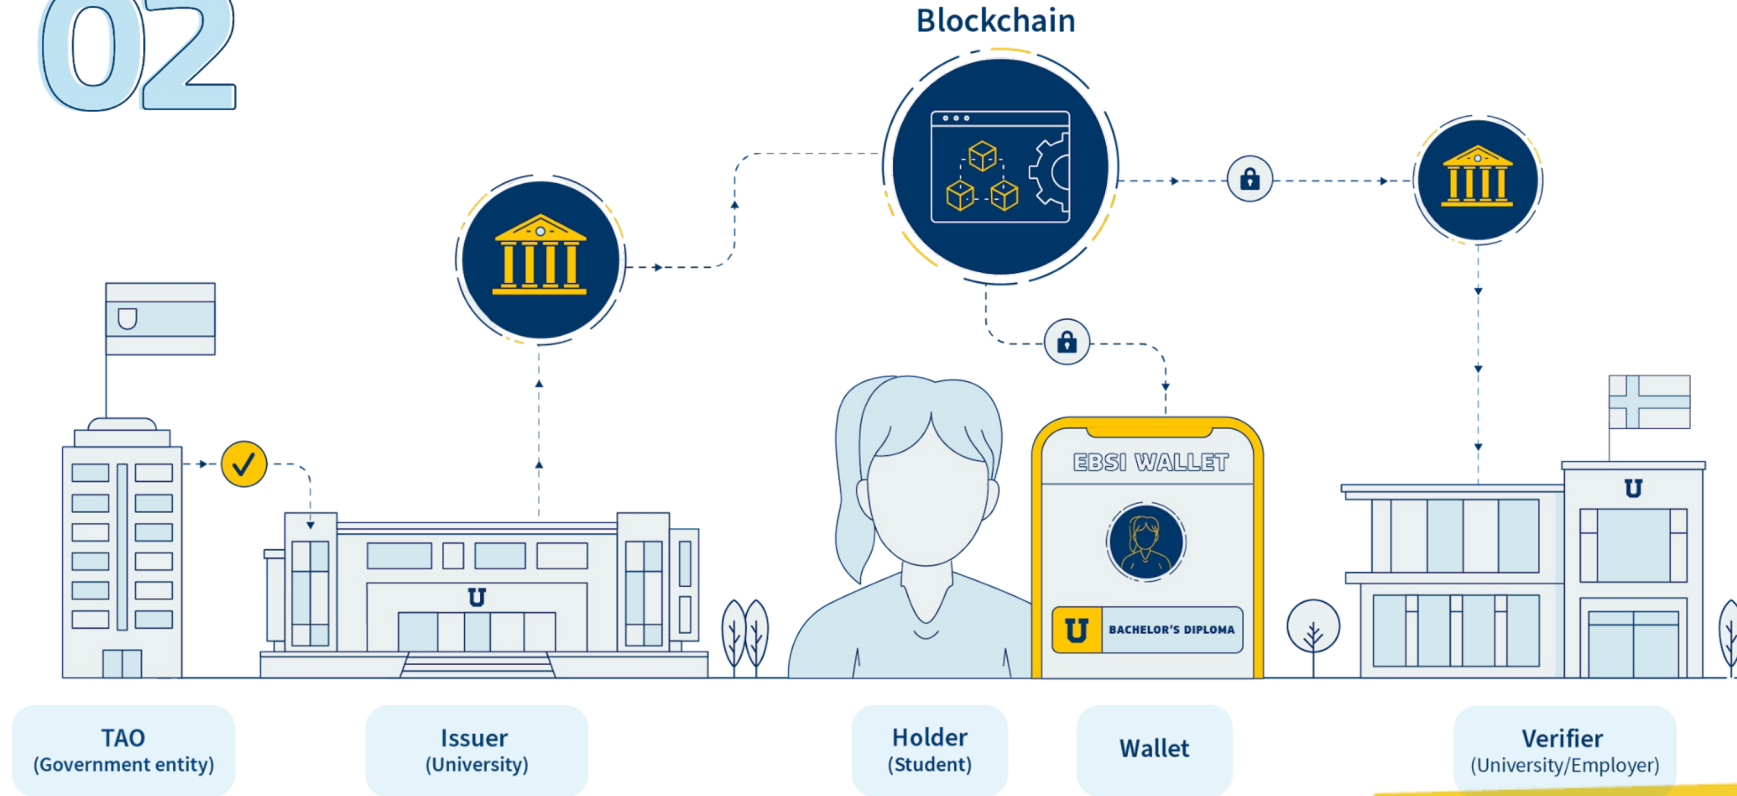

Reduce mistakes and protect against fraud, effortlessly interact with government agencies as well as reduce friction and reduce verification costs.

**Reduce costs**

# Verifiable Credentials on EBSI

02

## Standards

- ✓ W3C VCs & DIDs
- ✓ OpenID Connect

- ✓ High level of certainty that the issuer is trusted alongside the time of issuance
- ✓ High level of certainty that the holder is the one that the Verifiable Credential was issued to
- ✓ The holder keeps data control and ownership

# EBSI Early Adopters: Multi-University Pilot

Report by **Carmen, Victor & Tudor Holotescu**

Published in January 2022, last updates  on September 23, 2022

## Romanian Blockchain Ecosystem

<https://ebsi4ro.ro/romanian-blockchain-ecosystem/>

Based on an active implication, extensive research, and monitoring of the Romanian Blockchain scene since 2017, this work is a continually updated report of the **first attempt to map the Romanian Blockchain Ecosystem** published in 2018, followed by the **report** published on Medium in January 2021.

The new report is published under the auspices of the project “**EBSI4RO: Connecting Romania through Blockchain**”, the most important Blockchain educational initiative of the moment in Romania, the first two authors being part of the implementation team.

Without claiming exhaustiveness, the report offers a fresh perspective of the vibrant, diverse and mature initiatives in the field. Romania has a growing number of experienced companies, innovative startups and projects ( over 120 are presented below), active accelerators, many communities and events (section 1), and also numerous educational programs, initiatives and policy proposals (section 2).

During the last two years there were registered numerous innovative government projects, including the developing of a Blockchain strategy and initiatives for specific national legislation for crypto-assets and Blockchain, also some pioneering projects in Europe, such as the Blockchain voting reporting tool for the national parliamentary elections in 2020, and a national system and policies for verifiable diplomas and micro-credentials on the **European Blockchain Services Infrastructure (EBSI)** (sections 1.11, 1.12, 2.6).

 Part of the findings of this work are presented in the new **EU Blockchain Ecosystem latest developments**, a report of the **EU Blockchain Observatory**, published on September 9, 2022, for which **Carmen Holotescu** was the **Romanian expert**.
